Summer Math – Sayre Middle School

Rising 5th Graders 2021-2022

Dear Rising 5th Grade Parents,

Once again, it's time for summer math! The summer math expectations for Sayre Middle School's rising 5th graders will be to complete an average of 30 minutes per week, or at least 5 hours, of summer math in their math workbook. Our goals for your students are:

- retained math skills learned during the past school year
- strengthened problem solving and critical thinking skills
- an enriched math interest
- boosted confidence

On the first days of school in August, your student's math teacher will be looking for mastery of topics and progress of topics, not just time logged or completion of time. It is typically the first grade of the year – obviously we are interested in time invested, growth, and mastery, ***not perfection***.

We are excited to work with your students next year and hope you have a wonderful summer. Let us know if you have any questions!

Sincerely,

Sayre Middle School Math Department
